REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The present invention pertains to a circuit and method for performing memory tests. The claimed invention recites features such as "...an ECC circuit which supplies the data memory with a test pattern for detecting a bit error for all cells of the data memory, generates code data as the ECC code from the test pattern using a Hamming matrix which meets predetermined conditions, and supplies the code memory with the code data, the ECC circuit generating the code data for detecting a bit error for all cells of the code memory using a transposed matrix of the test pattern and the Hamming matrix; and a test circuit which simultaneously tests the data memory and the code memory based on the test pattern written in the data memory and the code data generated by the ECC circuit."

The prior arts of record (Solt et al. U.S. Patent No. 6,988,237 as an example of such prior arts) teach a memory having a plurality of memory lines/data cells each to store a data bit, and a plurality of error-correction (EC) cells each to store an EC bit corresponding to the data bits stored in the data cells of the memory line; an EC input circuit to generate the EC bits based on the corresponding data bits; an EC output circuit comprising an EC correction circuit to correct errors in the bits read from the data cells of each of the memory lines in accordance with the bits read from the EC cells of the memory line; and a switch comprising first inputs to receive the EC bits from the EC input circuit, second inputs to receive test EC bits from EC test nodes of the integrated

circuit, and outputs to provide either the EC bits or the EC test bits to the memory in accordance with a test signal.

The prior arts however fail to teach "...an ECC circuit which supplies the data memory with a test pattern for detecting a bit error for all cells of the data memory, generates code data as the ECC code from the test pattern using a Hamming matrix which meets predetermined conditions, and supplies the code memory with the code data, the ECC circuit generating the code data for detecting a bit error for all cells of the code memory using a transposed matrix of the test pattern and the Hamming matrix; and a test circuit which simultaneously tests the data memory and the code memory based on the test pattern written in the data memory and the code data generated by the ECC circuit."

As such, modification of the prior art of record can only be motivated by hindsight reasoning, or by changing the intended use and function of the prior art. Therefore, it is not clear that one of ordinary skill in the art at the time of the invention would have made the necessary modifications to the prior art of record to encompass the limitations set forth in the present application. Moreover, none of the prior arts of record, taken either alone or in combination, anticipate or render obvious the claimed inventions. Hence, claims 18-27 are allowable over the prior arts of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cynthia Britt whose telephone number is 571-272-3815. The examiner can normally be reached on Monday - Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jacques Louis-Jacques can be reached on 571-272-6962. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
